(54) Title: DUTP BASED COMPOSITIONS FOR REDUCING PRIMER-AGGREGATE FORMATION DURING NUCLEIC ACID AMPLIFICATION

(57) Abstract: Methods and compositions are provided for enhanced specificity and sensitivity of amplification reaction mixtures. Compositions in accordance with the present invention provide for reduced formation of primer-aggregates during amplification reactions. Reaction mixes include dNTPs, where a portion of the dNTPs has been replaced with an unconventional nucleotide, e.g., dUTP. Unconventional nucleotide concentrations are typically between 10 % to 50 % of the concentration of one of the standard dNTP. In some compositions the unconventional nucleotide is dUTP which replaces from about 10 % to about 50 % of the dTTP in the dNTP mix.

Declarations under Rule 4.17:

- *as to the identity of the inventor (Rule 4.17(i)) for all designations*
- *as to applicant's entitlement to apply for and be granted a patent (Rule 4.17(ii)) for all designations*
- *as to the applicant's entitlement to claim the priority of the earlier application (Rule 4.17(iii)) for all designations*

Published:

- *without international search report and to be republished upon receipt of that report*
